

# M=SLED MODULAR

Optimized workflow & battery testing

Safer Mobility.

Deceleration sled with modular design and a plus of flexibility for modern crash facilities: a two-piece undercarriage supports various modules in its center, which can be easily exchanged or mounted in longitudinal and transverse orientation.

These features allow to run standard applications such as safety belt or child seat tests. In addition the lightweight construction in combination with the floodable container module serves all needs to test heavy traction batteries as well. All with one sled!

# OPTIMIZED WORKFLOW & BATTERY TESTING

## M=SLED Modular

- Modular concept with various setup options
- Standard flat module as universal test platform
- Safe battery testing with floodable container module
- Quick and easy change of the module or its orientation
- Compatible with HydroBrake and ordinary PU and bending bar brakes
